Description

I've had the following error message several times now.

This applications has raised an unexpected error and must abort.

r6 Type mismatch: wanted Integer, got Null instead.
Ping.Ping_Kill.98

History

#1 - 04/10/2010 07:47 PM - rdnzl

Hi, that's strange, it seems that the .Tag of the ping process is empty, this should hold the Id of the ping device.

iId = LAST.Tag

How many ping devices do you have in your database, which version of Gambas are you running. Does it reports normal values when it works in between the errors?

#2 - 04/11/2010 11:34 AM - Anonymous

At the moment I've got 10 different ping devices in the database.
I haven't upgraded to the 2.20 version of Gambas yet to be honest smile.png

yes, it reports normal values when it works in between the errors.

#3 - 04/12/2010 09:15 AM - rdnzl

You can add these 2 lines just above END in Ping_Kill() in Ping.module
--
CATCH
Main.WriteDebugLog(("ERROR: Parsing Ping Result: ") & Error.Text & " at " & Error.Where)
--

This will prevent Domotiga to stop when the error occurs.

But it would be nice if you leave it out for a moment and post the contents of LAST.Tag and LAST.Value.

You can get them when you run domotiga from the IDE and when the error occurs just select these 2 variables in Ping.Module with your mouse, you will see the values.

#4 - 04/12/2010 09:16 AM - rdnzl

Remove the ? from WriteDebugLog above, it was added by the wiki.

#5 - 11/05/2010 08:54 AM - rdnzl

- Status changed from New to Closed

- Resolution set to fixed
